

LayerZERO

A COLD BORE TECHNOLOGY

Enterprise Communication for Completions

LayerZERO connects the entire frac operation allowing services to share data and communicate in real time, dramatically reducing manual data entry for OSRs.

LayerZERO Instant Advantages:

- Allows for full site visibility to **Wireline, Pumpdown, Frac, Wellhead, Etc.**
- Automates your timeline through non-biased sensors - APR (Auto path recognition) uses a proprietary algorithm to automatically detect on-site events like **Wireline** or **Frac Operations** etc.
- Allows OSR to have instant access to **Wireline, Pumpdown, and Frac** to real-time and historical data on-site.
- Access **SmartPAD** anytime, anywhere with the mobile app.
- Identify valve leaks or trapped pressure before they escalate
- Detect communication between wells

Scan to Download the **SmartPAD** App

FRAC

LayerZERO Instant Advantages:

- Instant access to zipper KPIs
 - Track pumping efficiencies
 - Monitor well swap times
 - Visualize valve positions and wellhead pressures with the on-site Frac Tree Monitor
 - Ability to see pressures changes in real-time
 - Real-time remote access to frac data
 - Provides non-biased timestamp for the entire operation
-

WIRELINE

LayerZERO Instant Advantages:

- Instant access to wireline KPIs
 - Accurate digital time tracking of wireline maintenance
 - Optimize wireline operations with real-time frac stage tracking and preparation insights.
 - Visualize valve positions and wellhead pressures
 - Provides accurate time-stamp for downhole operations
-

PUMPDOWN

LayerZERO Instant Advantages:

- Accurately cross-reference historical pump down rate and wireline depth
- Optimize pumpdown operations with real-time wireline stage tracking and preparation insights
- Visualize valve positions
- Live view of wellbore pressures for better equalization
